The life expectancy of our population is on the rise and it is obvious that the problems related to ageing are increasing steadily. A huge spectrum of spinal disorders affect the elderly population and at times cripples them. Degenerative conditions leads to severe back pain and might pinch the nerves in the spine leading to paralytic conditions. The bones in the spine might get weak and brittle due to Osteoporosis and this might lead to fractures with collapse of the vertebrae leading to severe disability. The ageing spine can get deformed leading to postural imbalance and gradually these elderly patients become completely bed bound.

To spread awareness of this important health problem in the geriatric population, Spine Society of West Bengal is organizing an interactive session on the Ageing Spine and the best doctors in the city would be there to answer your concerns. A galaxy of medical specialists including Endocrinologists, Orthopaedicians, Neurosurgeons and Spine Surgeons would be available for interaction and this event promises to be an excellent health awareness program for our society. It will address an important health issue with immense societal impact.

We take pleasure in inviting you for the same.

President

Secretary
